STUDY NO.4

Gender Gap in Science

Analysis of 1 million names from ORCID
and thousands of names from HighlyCited

SOURCES

GENDER GAP GRADER

Harvard Magazine

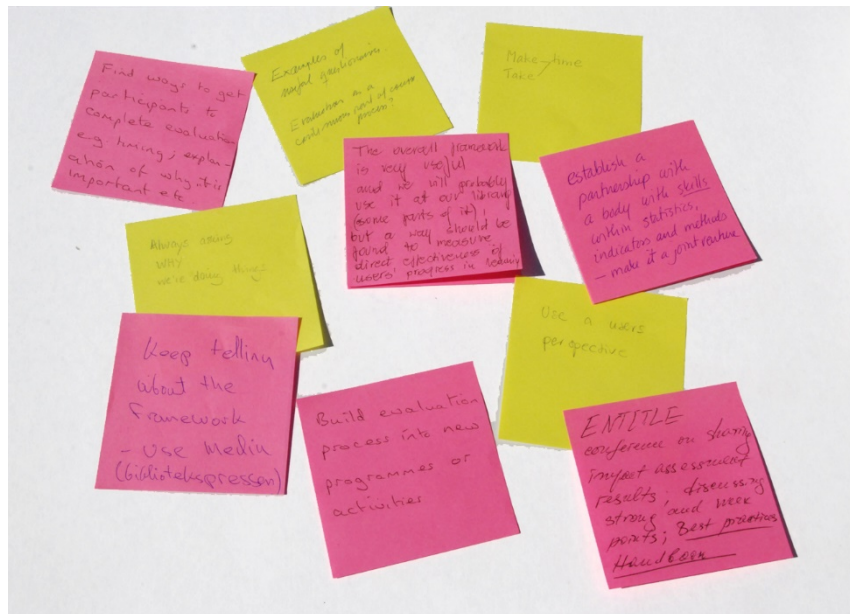

Fig. 1. Adapted from Rey's (1941) complex figure.

FlashReports

Counter-stereotypic beliefs in math do not protect school girls
from stereotypic threat

Pascal Huguet^{a,*}, Isabelle Régner^b

Stay open to all opportunities (or trigger them)

Be patient, keep enthusiasm, work hard, develop collaborations

For girls: don't underestimate yourself

For boys: work with women (they are easy, well-organized and flexible)
